

Freedom Blades Homebrew Rules

1. Character Creation

The standard rules of D&D 5e are generally followed; however, some homebrew changes and clarifications exist. These changes are described in this section.

1.1 How to create your Character

Generally, no more than two characters should be created per player. The guild council must agree to exceptions. The following are the common rules applied to every new character creation process:

- **No evil alignments** or anything that typically goes with that like wanting destruction and killing innocents.
- Your character must want and be able to work with others in a team, or they would not have joined an adventurer's guild.
- The **27 point buy** method is used to determine the Ability Scores.
- Average health gain per level (rounded up).
- Every Background gets:
 - +2 and +1 on 2 ability or +1 on three abilities +1 (free choice)
 - 2 skill proficiencies (free choice)
 - 1 origin feat (free choice)
- Every **species** gets the features described in the PHB 2024 OR if the species doesn't exist in 2024, the features (no ability score adjustments) from 2014 races, player's choice (by individual feature).
- Every **feat** that is not an origin feat and not part of the PHB 2024 gets +1 to an ability. The general rule is:
 - For **martial feats**: +1 to STR, DEX, or CON
 - For **magical feats**: +1 to INT, WIS, or CHA
 - For **other feats**: +1 on an ability of your choice

- **Subclasses** not yet part of the PHB 2024 are logically transferred to D&D 2024 on an individual level. Generally, the subclass features stay the same, if possible. The player can make suggestions on how to transfer sub-class features to D&D 2024.
- If it is not clarified by the Subclass (because it was not revised for the 2024 rules yet), every Subclass that gets an Extra Attack also gains at least one **Weapon Mastery**. Full Martial Subclasses get at least two Weapon Masteries.
- After creation the chosen feats and backgrounds will need to be approved by the Guild Council and will be balanced individually from character to character. This CAN result in one character being allowed to use a feat/background which is not allowed for another character due to **server balancing**. We focus on fun and roleplay, not on min/maxing, but we will try to compromise as much as we can.
- Otherwise, any legal build is allowed, though a DM may not always follow RAW when it comes to potential exploits.
- If you have any special requests for your character, please discuss those with a DM, generally any cosmetic and roleplaying features will be granted.
- When creating your character, use the starter equipment, not the starting gold. This is because the gold your character receives is determined separately in the **#keep-it-rolling** channel. Each character receives a starting capital of **4d4 x 10 GP**. You can keep the equipment and gold you receive from your background.
- Start your character at **level 4**.
- As a **welcome gift** from the Guild you get one Healing Potion and a [*Potion Bandolier*](#).

Requests for character changes after the character has been approved must be submitted to the guild council together with its reasons. The guild council votes on whether the changes will be allowed.

1.2 Variant Encumbrance 2x

Encumbered: When carrying more than ten times your Strength score, your speed drops by 10 feet.

Heavily Encumbered: When carrying more than 20 times your Strength score, your speed drops by 20 feet. Additionally, you have a disadvantage on ability checks, attack rolls, and saving throws that use Strength, Dexterity, or Constitution.

Creature size impacts encumbrance. Size modifiers are as follows:

Size	Tiny	Large	Huge	Gargantuan
Modifier	x0.5	x1.5	x2	x4

1.3 Extra ASI for all Classes

You gain one additional ASI (no feat, just an ASI). This applies to all classes (martial, half-caster, caster, etc.). This has no impact on your feats or ASIs, which you gain by reaching levels 4, 8, 12, 16, and 19 of your class. **You gain this benefit only once!**

1.3.1 Changes to Barbarians

When you reach level 5 as a Barbarian, you can choose one damage type you don't already have resistance against, other than psychic. You gain resistance to this damage type while raging.

1.4 Stacking Resistances

If you have resistance to a damage type from more than one source, you halve the damage only once. Then, after all other damage modifiers, reduce the damage by your proficiency bonus for each additional source of that resistance beyond the first (minimum 0).

Example: *If a Level 9 gold dragonborn is wearing a ring of fire resistance and an effect deals 30 damage to it, that damage would first be halved to 15 points of damage and then reduced by 4, causing the dragonborn to take 11 fire damage.*

2. Missions and Campaigns

2.1 Attending a Mission or a Campaign

Each mission is assigned a **Difficulty Badge** (based on the Levels & Ranks table in Chapter 3) representing the ideal character badge for participation. A character may join a mission if their badge is **no more than two ranks higher** than the mission's Difficulty Badge.

If a character joins a mission whose Difficulty Badge is **two ranks below** their own badge, they do so as a **mentor** (expected to hold back) and **do not gain advancement credit**, though they **may** receive other rewards at the DM's discretion. If a character joins a mission whose Difficulty Badge is **higher** than their own badge, they do so **at their own risk**.

If more players want to join a mission than there are available slots, priority goes to those who haven't played in the longest time (per "Last date played" in the **Character Master Sheet**).

For **campaigns** (more than three connected missions), each player has a **campaign counter** that starts at 0 and increases by 1 each time they send a character on a campaign; players with the lowest campaign counter get priority when choosing a character for a new campaign.

Generally (DM's discretion), you can't join a mission with a character that is already on another mission or campaign. Additionally, you must keep at least one character available to join **guild missions** (up to three connected missions), so you can't commit all of your characters to campaigns at once.

2.1.1 Advancement Credit

Both players and DMs can **add the mission to their mission count** (usually determined by the DM) **if** the mission is at least three hours long and a reasonable threat was given. A night at the tavern -pure fluff- or similar sessions, are no thread and

don't give a reason for gaining experience. The DM can choose which of their characters adds the mission. You can forego your advancement credit for gold (see next paragraph).

2.1.2 Guild & Report Reward

Player characters receive gold depending on their rank for each successful mission from the guild. If a report is written, additional gold from the guild can be earned for this, also dependent on the [character's rank](#). Guild rewards are only applicable for guild sanctioned missions. However, because the guild places more value on information than gold, they still give out report rewards as if it was a guild sanctioned mission in the first place.

The DM can create lore for locations, important NPCs, or objects to expand the world of Nerev or other settings in the game. This contribution earns gold based on the rank of one of the DM's characters, which can be awarded to a character of the DM's choice. Alternatively, the DM may write a report on behalf of an NPC to the guild for the same reward.

Confirmations of your mission rewards are made in the **#goodies-confirmation** channel. Only when you have posted in the channel which reward you have collected for your last mission, will it be credited to the [character master sheet](#).

Optional: Any player or DM can choose to not add the mission to their mission count and instead receive an additional gold reward equal to 30 GP per level already achieved for a character of their choice. A lvl4 character would receive 120 GP, if the player chose to not add a mission to their mission count. This gives both Players and DMs a way to still progress their character while staying behind in level to let others catch up.

Moradinium Purchase with Advancement Credit Gold: When a player or DM chooses to not add a mission to their mission count and instead receives the additional gold reward (30 GP per level already achieved for a character of their choice), they may use this specific gold to purchase Moradinium from the guild at the current accounting rate.

The **accounting rate for moradinium** is currently set at **50 GP per 1 Moradinium**. This rate is defined and adjusted by the Guild Council and may change in the future; any changes apply only to future conversions.

2.1.3 Extra Rewards (Loot) & Distribution

Extra Rewards are everything that is rewarded to the characters beyond the guild or report reward for one mission. DMs can reward attending characters with **additional items, valuables, or money** found, looted, or awarded by thankful NPCs during the mission. All extra rewards are, by default, sold to the General Shop or Magic Item Shop for 100% market value (or 200% crafting costs for magic items see [6.5.2.1](#)). This rule applies also for quests which are not issued by the guild. It's a server-wide rule to ensure equal compensations.

If a character wants to **claim a certain item for themselves**, they must **pay the other members** to reward them appropriately, unless another party member claims it.

Example: *A party consisting of five characters finds loot consisting of various weapons and gear the enemy left behind and some magical items found in a treasure chest.*

*- one chainmail (75 GP), two Pikes (2 x 5 GP), one Longsword (15GP) for a total of 100 GP worth of equipment
- one Dread Helm (common), two Feather Token (common), one Hat of Vermin (common), one Orb of direction (common)
IF the DM just lists the loot as above, everything is sold by default to the shop for 100% market price (200% crafting costs see 6.5.2.2).*

In this example this would be 5 x 100 GP for five common items. Each player would get 120 GP in total (100 GP from the item and 20 GP from the sold equipment).

Of course one or more players can claim one of the magic items or equipment pieces, in this case they have to compensate the rest of the group with $\frac{1}{5}$ (because there are five characters) gold worth for each player. In this example it would cost 80 GP to get one of the above mentioned magic items (as $\frac{1}{5}$ of the value belongs to that character already). This means, the player getting the magic item gets the mentioned item +20 GP and the rest of the party still gets 120 GP (20 GP from the sold equipment, 80 GP from selling the remaining four common items, and 20 GP from the player that wanted to keep the item).*

On the other hand a GM is allowed to directly assign items directly to players. The DM can write a sentence like: *Each player gets one of these magic items or 100 GP instead. Using this exception for the above mentioned Example, each player gets either 20 GP plus a magic item from the list, or 120 GP (including the other loot).*

*Math behind it: You take out the item you want (that is then not sold) and sell the rest, which is 400 GP divided between five characters is 80 GP each, then you give your 80 GP to the other, so they get 100 GP each (its four of them) and you get nothing out of the sale of the residual magic items. The 20 GP you retain are then from the sold equipment. You could also just take out the item and pay 100 GP into the loot, that would be divided between all of you (so getting 20 GP back from the money you put in).

2.1.3.1 Maximum extra Rewards

To account for the difficulty and scale of a mission, [extra rewards](#) have an upper limit. While each character receives their [guild and report reward](#) based on their personal rank, the maximum value of **extra rewards** (including everything awarded beyond guild and report reward and converted into currency like explained in the paragraph [2.1.3 Extra Rewards \(Loot\) & Distribution](#)) for the mission is determined by the mission's difficulty badge - not by the individual participants. As a general rule, this cap is **ten times** the standard **guild reward** for the mission's difficulty badge (also see chapter **3 Levels & Ranks**).

Moradinium is evaluated with the accounting rate given in [2.1.2 Guild & Report Rewards](#), **Moradinium Purchase with Advancement Credit Gold**.

Example (simple): *A group of five guild members completes a mission assigned with a **Silver Badge**. Each character's standard guild reward is **50 GP** as they are all in the Knight rank (silver badge), the silver badge difficulty means the maximum extra reward per character is **500 GP** (ten times the guild reward).*

*During their adventure, the party finds a hidden treasure chest containing **1,500 GP** worth of gold coins, gems, and valuables.*

*Since the loot totals **1,500 GP**, dividing evenly among five party members means each adventurer receives exactly **300 GP**, comfortably below their individual cap of **500 GP**.*

Thus, each party member ends up with:

- **50 GP** (Guild Reward, plus Report Reward, if a report is written)
- **300 GP** (Extra Reward)
- **Total: 350 GP** each (plus Report Reward, if a report is written)

Example (complex): *Again a group of five guild members successfully completes a challenging mission marked with an **Electrum Badge**. So, according to the rules and the table in chapter 3, each character's maximum extra reward cap is **850 GP** (ten times the guild reward for an electrum badge).*

*During their adventure, the group finds a rare magic item: a **Flame Tongue Longsword**, valued at **4,015 GP** (including the 15 GP for the base longsword). Additionally, they discover a small pouch containing gems worth **235 GP**, bringing their total loot to **4,250 GP**.*

Divided equally among the five party members, each character would ideally receive exactly **850 GP**, fully matching their individual extra reward cap.

However, Bal’Gul, the group’s Fighter, wishes to claim the powerful **Flame Tongue Longsword** for himself. To do this fairly, he must compensate his four companions appropriately:

- First, the other four party members take the **235 GP** worth of gems and split this among themselves, receiving **58 GP, 7 SP, and 5 CP** each. Bal’Gul gets none of this, as he is taking the sword.
- Each of these four companions is still entitled to their full individual loot share of **850 GP**. Having received **58 GP, 7 SP, and 5 CP** from the gems, each companion is now short exactly **791 GP, 2 SP, and 5 CP** of their rightful share.
- Bal’Gul compensates each of his companions by paying them **791 GP, 2 SP, and 5 CP** directly, totaling **3,165 GP**.
- In the end: As Extra Reward Bal’Gul receives the **Flame Tongue Longsword (4,015 GP)** but no additional gold or gems and has to pay **3,165 GP** to his fellow party members. Each of the other four party members receives their full share of **850 GP** each (58 GP, 7 SP, 5 CP from gems + 791 GP, 2 SP, 5 CP from Bal’Gul).
- Obviously, the characters also receive the guild and report rewards according to their rank and badge.

2.1.3.2 Disputes over Item Distribution

If a **dispute** arises over who is **entitled to an item** found and several party members want to claim that item for themselves (by paying off the other members accordingly), the following procedure applies:

1. At the end of the mission, all participating Freedom Blades roll a D20.
2. Starting with the highest roll, each player may claim one item for themselves. If a group member does not wish to claim an item, the claim is forfeited for this round.
3. Unclaimed items can then be taken by any group member, provided there are no further disputes. Otherwise, the items must be sold.
4. If several group members roll the same value, they roll the dice again to determine a clear order. However, they retain the overall order, so they cannot move higher or lower than their first roll allowed.

Example: 5 Freedom Blades roll the dice 10, 13, 13, 14 and 18. The two members with the 13 roll again to determine who gets 3rd and 4th place. The group members with the rolls of 18 and 14 remain in 1st and 2nd place.

2.2 Better Criticals

When landing a crit, the damage equals the maximum normal damage for the attack damage + the damage dice rolled an additional time.

2.3 Hardcore Healing

During a short rest a character can only spend **hit dice up to their proficiency bonus** to heal.

During a Long Rest, a character does not regain health automatically but must spend hit dice to do so. **They can spend as many hit dice as they like.** They also regain spent Hit Dice, up to a number of dice equal to half of the character's total number of them (minimum of one die). They can use these dice to heal immediately if they wish.

2.4 Resting in the Wilderness

If a character who is not proficient in the survival skill takes a long rest in the wilderness (in unsafe or uncomfortable conditions) they must make a **constitution save** to avoid taking a level of exhaustion (they still receive all other benefits of the long rest).

The DC starts at 10 and increases by 5 every time they rest this way, until spending at least one night at an Inn or another comfortable and safe location.

If a character sleeps in a tent, they have **advantage** on the roll.

If even one of a group's characters has the survival skill, the DC is not increased for consecutive nights. If half or more characters in the group have the survival skill, no one has to make a save.

2.5 Inspiration Coins

As a reward for **great roleplay** or for **completing optional goals**, your DM may award you with Inspiration Coins. They are in addition to normal inspiration.

When your DM prompts you to do so, roll d6 to see which coin you gain, they each have different effects.

You can only have **one inspiration coin at a time**, If a new roll is granted you can choose to keep your current coin or replace it. You can spend your inspiration coin to activate the effect. This has nothing to do with heroic inspiration.

1. **Flashback:** Describe an action your character took to prepare for your situation.
2. **Indomitable:** Increase your AC by 10 for 1 round.
3. **Last Breath:** When you would drop to 0 hit points, go to 1 instead.
4. **Magic:** Cast any 1-level spell regardless of class, except for spells with permanent effects like *find familiar*.
5. **Speed:** Double your base movement speed and ignore difficult terrain for 1 round.
6. **Super Inspiration:** Re-roll any D20 roll. Even one made by an enemy. The new result must be used.

2.6 Carrying too many Spell Scrolls

If you are carrying a number of scrolls on you higher than your **proficiency bonus**, it takes **1 action to find and pull out the correct scroll**.

You can **use the scroll as part of that action** if the **scroll's casting time is 1 action**.

This means that you can only use scrolls of casting time **bonus action** or **reaction** if you are carrying a number of scrolls **equal to or lower than your proficiency bonus**.

2.7 Carrying too many Potions, Brews or Poisons

Potions, brews, and poisons and some other substances like acid are quite fragile. If you carry them on you unprotected, they may break and spill their contents.

Upon joining the Freedom Blades guild, each new member receives a **Potion Bandolier**. It weighs 2 pounds, is magically sealed and holds up to 6 potions and other vials securely.

If you are carrying **unprotected potions** on you, a random one **will break** when you roll a **natural 1** on certain saving throws or ability checks, determined by your DM.

Example: If you roll a **natural 1** on a dexterity check to jump across a table, you may land on one of your vials causing it to shatter.

Further, **when you take damage from a critical hit**, you must choose one of your unprotected vials (if you are carrying any) which broke during the attack.

When a vial breaks, the leaking contents may or may not have certain **(negative) effects** depending on the circumstances.

Example: A contact poison touching your skin would require you to make a save against the poison, or a vial of spilled acid may damage your armour or cause you to take acid damage.

2.8 Flanking

A creature can't flank an enemy that it can't see. A creature also can't flank while it is incapacitated. A Large or larger creature is flanking as long as at least one square or hex of its space qualifies for flanking.

When a creature and at least one of its allies are adjacent to an enemy and on opposite sides or corners of the enemy's space, they flank that enemy, and each of them has advantage on melee attack rolls against that enemy.

When in doubt about whether two creatures flank an enemy on a grid, trace an imaginary line between the centers of the creatures' spaces. If the line passes through the center of the enemy's space, the enemy is flanked.

3. Levels & Ranks

All guild members start their first mission at level 4. The following table shows how much GP each member receives as a mission reward and which levels correspond to which rank or badge:

Badge	Level	Rank	Guild Reward	Maximum extra rewards*	Report Reward
-------	-------	------	--------------	------------------------	---------------

Iron	1 - 2	Recruit	10	100	50
Bronze	3 - 4	Sellsword	15	150	60
Steel	5 - 6	Freedom Blade	25	250	75
White Steel	7 - 8	Guardian	40	400	85
Silver	9 - 10	Knight	60	600	100
Electrum	11 - 12	Grand Knight	85	850	110
Gold	13 - 14	Champion	115	1150	120
Mithral	15 - 16	Veteran	150	1500	150
Platinum	17 - 18	Hero	200	2000	200
Adamantine	19 - 20	Legend	250	2500	250

*According to mission badge, not character badge!

3.1 Leveling up

You level up based on the number of missions you successfully complete or DM. Please see below the number of sessions required to level up at each level.

Current Level	Next Level	Missions	Cumulative Missions
1	→ 2	1	1/-
2	→ 3	3	4/-
3	→ 4	4	8/-
4	→ 5	5	13/5

5	→ 6	6	19/11
6	→ 7	6	25/17
7	→ 8	8	33/25
8	→ 9	8	41/33
9	→ 10	10	51/43
10	→ 11	10	61/53
11	→ 12	6	67/59
12	→ 13	8	75/67
13	→ 14	10	85/77
14	→ 15	10	95/87
15	→ 16	10	105/97
16	→ 17	12	117/109
17	→ 18	12	129/121
18	→ 19	16	145/137
19	→ 20	20	165/157

4. Buying & Selling Stuff

4.1 General Store & Magic Item Shop

You can buy and sell standard items at the general store ([5e.tools](#)) and magical items at the magic item shop, to do so, please post into the #trading channel with what you are buying, for how much and what your final money is after the trade. The magic item shop doesn't buy any legendary items or consumables and no very rare items. However, it buys any number of very rare or more common consumables and rare or more common items.

All magic items sold to the guild are automatically added to the Magic Item Shop inventory at 200 % of their crafting cost. At the end of each week, 1d4 items are removed from the Magic Item Shop inventory to represent sales to external adventurers. Items are removed strictly in FIFO order (first in, first out), meaning the items that have been in the shop the longest are removed first.

When you sell an item to the general store or magic item shop, you normally do so at 140% the item's crafting costs. However, this excludes vendor items which are items with no use other than their stated gold value (usually given out as mission rewards). These can always be sold to the general store at 200% their crafting cost if sold directly after the mission.

Example: Ugah brought a half plate armour back from a mission. The crafting cost of this armour is half its price of 750GP in the shop. Ugah keeps the armour. Later he decides to sell it to the shop and gains $750\text{GP}/2$ (Crafting cost are always half the price in [Se.tools](#)) * 140% = 525 GP. If he had sold it directly after the mission he would have gotten 750 GP

4.1.1 Haggling

When selling an item to either the Shop or NPC customers, you can try to *haggle* to improve your selling price.

To haggle, make an **Earning Roll using Persuasion**. If you do so you add the result of the roll to the **selling percentage** for that transaction, up to a **maximum of 180% of crafting cost**. to determine the selling price.

If the Persuasion check result is a **natural 20**, the seller gains an **additional +10%** to the final selling percentage.

The selling percentage cannot exceed **180%** of crafting cost.

Follow-up Example: *Later Ugha decides to sell the half plate armor to the shop and would gain $750\text{GP}/2 * 140\% = 525 \text{ GP}$.*

Ugha isn't satisfied with the initial selling price of 140 % of the crafting cost. Hoping to get a better deal, he tried to haggle. Rolling a **Persuasion (Earning) Roll** of 15, he managed to increase the selling percentage from 140 % to 155 %. With the crafting cost being 375 GP (half of the 750 GP crafting price), the final price he was able to sell it for came to **581 GP**.

4.2 Character Shops & Services

In addition to the shops and services offered by the guild, any player character can also offer their own services or sell items they have crafted or found.

Any character can post an offer or a request for assistance or a particular item in the **#offers-player-services** channel and someone wanting or offering such a service or item can contact them to negotiate a deal. Once a deal is negotiated it must be posted by both players in the **#trading** channel, tagging one another and a DM to verify.

If someone wants to offer their services or items to PCs they can make a one time purchase of a shop stall from the guild for a fee of 100GP. This will grant them access to the **Shop Owner** role.

4.2.1 Selling at your own shop

When selling **items** at **your own shop** (see [Character Shops & Services](#)) you can **add 20%** to the **selling percentage**.

This bonus stacks with the bonus granted by rolling a natural 20 and can result in a **maximum possible selling price of up to 190%** of the crafting cost.

Example: Lyrian has a +0 modifier for Persuasion. He is a **Shop Owner** and wants to sell a greatsword, which has a crafting cost of 25 GP. He rolls a natural 20 on the Persuasion (Earning) check to haggle.

The base selling percentage starts at the minimum of 140 %. Because he rolled a natural 20, he gains an additional +10 %, and selling his own crafted item at his own shop grants him another +20 %. Adding the Earning Roll of 20 % would bring the total to 190 %.

Calculation:

min. 140% + 20% (Persuasion) + 10% (nat. 20) + 20% (Shop Owner) = 190%.
Greatsword for (25GP*190%=) 47 GP 5 SP.

He sells the

5. Lifestyle Expenses (LC)

All Characters need to expend money for their weekly expenses according to their chosen lifestyle.

Whenever you gain a week of [Downtime \(DT\)](#), which happens every Sunday at noon, you also accumulate one week of lifestyle costs.

The next time you join a session, you must pay for the number of weeks you have accumulated to reduce your current lifestyle counter back to 0. You can see how many weeks of LC you have to pay in the [character master sheet](#).

The cost depends on the type of lifestyle your character has chosen since the last session you attended. (You get to make this choice every time you pay for your lifestyle expenses, but must choose the same lifestyle for the entire period you are paying.)

If you do not wish to pay for your lifestyle expenses or have no gold, but want to avoid the consequences of the wretched lifestyle, you can borrow the necessary money from your friendly local moneylender by the name of Frank. He spends most of his days around the seedier side of Albion and is happy to lend money to desperate folks in need. Like any money lender worth his salt, he does charge interest however and will want his dues paid sooner or later.

5.1 Wretched Lifestyle

- At the beginning of the mission you **roll 1d20**, on a roll **below nine** a random item is stolen. Alternatively, you can avoid this roll but instead suffer **a level of exhaustion** at the beginning of the mission.
- Further, a Constitution Save (DC 10) must be made and **a disease is contracted** on a failure unless you are immune to diseases.
- If carrying any **armour or weapons**, the AC and attack rolls will have a **-1 penalty** for lack of maintenance for the duration of this mission.

5.2 Modest Lifestyle

- **7 GP per week** or one week of downtime.
- No negative nor positive consequences.

- Instead of paying for your living costs, you can spend the week performing a regular job and hence expend your downtime instead of gold.

5.3 Comfortable Lifestyle

- **14 GP per week.**
- You gain **1 point of inspiration** at the beginning of the mission (a character can only have one point at a time and inspiration does not carry over to future missions, being lost at the end of the current one).
- You can maintain a [Bastion](#) with a maximum of **6 basic and 4 special facilities**. Each special facility costs **5 GP per week** extra.

5.4 Wealthy Lifestyle

- **28 GP per week.**
- You gain **1 point of inspiration** at the beginning of the mission (same inspiration rule applies).
- You gain **5 temporary hit points** (same rule as inspiration applies).
- You can maintain a Bastion with a maximum of **12 basic and 6 special facilities**. Each special facility costs **5 GP per week** extra.

5.5 Aristocratic Lifestyle

- **70 GP per week.**
- You gain **1 point of inspiration** at the beginning of the mission (same inspiration rule applies).
- You gain **10 temporary hit points** (same rule as inspiration applies).
- You can gain information or assistance through your influential and powerful contacts. Roll 1D100 for events related to this lifestyle (can be negative or positive).
- Once you choose this lifestyle, if for any reason a lower one is chosen even for a single week, this lifestyle will be unavailable to you for one year, and all its perks with it.
 - As royalty and high society enjoy their elite status they can tolerate someone gradually gaining enough influence and money to be invited, but if that person can't maintain their lifestyle they will be ousted.
- You can maintain a Bastion with **unlimited basic and a maximum of 7 special facilities**. Each special facility costs **5 GP per week** extra.

5.6 Frank the Money Lender

Frank will gladly lend a character money to pay for their living expenses, but charges **20% interest every week**. He won't start asking for the money back until a character owes him more than 500 GP and will happily lend them more until then. After that, he will start asking for his money, politely at first.

If the character is not able to pay the full amount, he is happy taking at least **20% of what they owe** (or until they owe not more than 500 GP), knowing that next week they will owe him more due to the interest.

If a character is not able to pay at least 20% of what they owe him, he will start asking less politely.

They may get away with it once but then they will gain negative consequences like people coming after them during a mission, some damage when they begin the mission as they have been roughed up by thugs, perhaps eventually even missing items to pay for what they owe. This is up to the DM of the mission and should be an interactive way to show the character the negative consequences of owing money to a loan shark.

6. Downtime (DT)

Guild life also takes place between missions. You can use your free time for many different activities, such as learning skills or crafting items.

Whenever you want to do something outside of a mission, this will be posted in the #downtime channel on the Discord server. When you post an activity, please note the resources you spent (e.g. gold or Moradinium). The Guild Council members will mark the messages with a **green tick**  as soon as the [character master sheet](#) has been updated accordingly. You are responsible for updating your personal character sheet in Foundry.

Each character accumulates 5 days of downtime (DT) per week up to a maximum of 60 days. One week of DT corresponds to 5 working days of approx. 8 hours in which you concentrate on a specific activity. Accumulated DT can also be split up and used for several activities.

The DT are awarded every Sunday by the guild council. There will be a notification in the **#announcements** channel and an adjustment in the [character master sheet](#).

When guild members are not on a mission, learning skills or crafting items, they can often be found in the Pork & Cheese Tavern (channel **#porkandcheese-tavern-rp**), where they spend time together or talk about their missions. The tavern owner Hank may seem a bit grumpy, but he's basically a peaceful and friendly guy.

6.1 Tracking your Money

Your overall money is tracked on the [character master sheet](#).

You can take some or all of your money on missions with you. If you choose to do so, please note this on your character sheet before the session starts.

The DM may ask you at the beginning of the session how much gold you are carrying with you. Please keep track of how much gold you started the mission with, so at the end we can determine how much your character gained or lost to update the record on the **character master sheet**.

6.2 Rolling dice during downtime

During downtime, we have different kind of D20 rolls:

Learning Roll

Basic ability check that includes only the character's basic ability modifier not changed by items, spells or any other feature. The rolls are made without the benefit of any feature, item or spell outside of the ability modifier gained by the character's ability score. Do not add a proficiency bonus (from skills or tools), expertise, feats or features, spells, species or class traits, magic items, or consumables. Resolve the roll as if the character had no gear and no species or class traits—only their base ability scores apply.

Earning Roll

Ability check with the relevant tool proficiency including all permanently available modifiers and features (so, no one-time changes like Guidance or similar).

Mining Roll

Straight D20 roll without any modifiers.

6.3 Learning Languages, Weapons, & Tool Proficiencies.

Per week of downtime (5 DT), if you spend the time on nothing else, you can make **1 learning roll** to progress in your studies of a proficiency.

Roll a D20 and add the relevant ability modifier based on the proficiency in use: Intelligence (for languages), Strength or Dexterity (for weapons), or Strength, Dexterity, Intelligence, Wisdom, or Charisma (for tools), as specified in the PHB 2024 and DMG 2024. Keep track of the result. Add to it every time you roll on the same proficiency. When you reach 100, you have acquired the new proficiency. Every point beyond 100 is lost.

If the roll is a **natural 20**, the character gains plus **1%** learning progress extra.

Learning some proficiencies requires a teacher. Most teachers charge 10 GP per week. For special proficiencies (like scroll or wand proficiency) they charge at least 50 GP. This will be negotiated with the teacher when you ask them to instruct you. Another PC can teach you if you can agree with them on a price, however they must spend their downtime to do so.

6.3.1 Languages

To learn a language you must **know someone who knows the language** and is willing to teach you, or you **must have a book** written in the language, in which case you make any related **check at disadvantage**.

For standard languages a teacher is easy to find, for uncommon ones, the player must find an NPC during the session who is willing to teach them. (This is then noted on their character sheet.)

If you already know a language that uses the **same script** as the language you are trying to learn, you gain **advantage on a roll** (straight roll if you are learning from a book).

If you have the Anthropologist background or the Linguist feat, you can add your proficiency bonus to your learning roll.

Common languages: Common – Dwarvish – Elvish – Giant – Gnomish – Halfling – Orc – Draconic

Uncommon languages: Abyssal – Celestial – Deep Speech – Infernal – Primordial – Sylvan – Undercommon – Goblin – Common Sign Language

6.3.2 Weapons

Weapon proficiencies must be learned for **each individual weapon**, not weapon class.

When learning a weapon proficiency, you add your **STR modifier**. If the weapon in question uses DEX as an attack modifier, you may use your **DEX modifier** instead.

Weapon teachers are relatively easy to find for an adventurer. **Martial weapon proficiencies cost 20 GP** per week to learn. **Weapon masteries cost 25 GP** per week to learn.

You can only learn a **weapon mastery** for a weapon you are proficient in and you have **disadvantage on all checks** involved with martial weapons to learn a weapon mastery.

If you have the **weapon master feat** you gain advantage on your learning rolls (straight roll for Martial weapon mastery).

6.3.3 Tool Proficiencies

Each tool proficiency must be learned separately, not per category. To start learning how to use a tool, you must first acquire one.

6.3.3.1 Artisan's Tools

Most artisans' tools have a craft associated with them (For example smithing tools are used for blacksmithing). Each craft has three ranks: **Journeyman**, **Expert**, and **Master**. You gain the proficiency for the associated tool once you reach the first rank, and you gain expertise with the same tool on reaching the third rank (**Master**).

If your character gains proficiency in the tool through another way, ie. from their character background, or class features, they gain the **Journeyman** skill level as well. Once in their lifetime, if a character gains expertise with a tool through a class feature, feat, or similar, they have the option to also gain expert skill level in that tool.

Journeyman

To achieve the rank of Journeyman, you must find a teacher willing to take you on, for this rank they are generally easy to find. As part of your education, you will work for your instructor and hence do not need to pay them additional gold.

Expert

If you do not have expertise with the relevant tool, you gain a +1 bonus to any ability check you make with the tool (this bonus no longer applies if you gain expertise).

Expert instructors are also reasonably easy to find for an adventurer, but they do not have need for additional hands and must focus on your education for you to achieve the rank of Expert, so you must pay them accordingly. 25 GP a week is the normal price for this.

Master

You gain expertise in the tools you master. You can only become a Master in one artisan's tool, so choose wisely.

Master crafters are rare and hence you must find an NPC willing to teach you. A master will contact you after your work is spread in the kingdom and the master catches interest in you.

A master will contact you after you gain 100 **crafting reputation points** according to following table:

Item Rarity	Earned CRP (pro Non-Consumable)	Earned CRP (pro Consumable)
Common	2,5	0,5
Uncommon	7,5	1,5

Crafting reputation points (CRP) will be tracked on the [character master sheet](#) for each tool you use separately.

After accumulating 100 CRP in a tool a respective master will contact you to craft an **uncommon item** (chosen by DM or randomly), to prove your skill-set. You have to give that item to the master for free as a token of respect.

After proving your skillset, you are allowed to start spending your Downtime to roll a d20 adding the relevant ability modifier, and spending 100 GP per lesson, to become a master. When you reach 100% you finally finish your lessons and become a master yourself.

Finishing your lessons you also achieved to create a **rare item of your choice**. You will have to pay the respective crafting cost without spending an extra downtime. This is the “masterpiece” you created during your lessons which you have to keep as proof of your status as master of your craft (except if your “masterpieces” are consumables). Of course, you can use that item during downtime or your missions.

6.3.3.2 Gaming Sets

You can learn these from a teacher the same way you learn other tool proficiencies or by playing for money at a tavern or similar establishment. Every time you gamble with a certain gaming set, you can also make a learning roll on it. If you pay someone to teach you, they will charge around 10 GP a week.

6.3.3.3 Musical Instruments

You can find teachers for any instrument quite easily. You must pay them 10 GP a week to teach you.

6.3.3.4 Kit Proficiencies

To become proficient with the **disguise kit or the forgery kit** you must find an NPC during play who agrees to teach you, as these are all quite specialised skills. The NPC will agree on a price with you.

6.3.3.5 Thieves' Tools

To become proficient with thieves' tools you must find an NPC teacher, who will charge a minimum of 50 GP per week but may charge more. Unless you have levels in the bard class, you make any learning rolls at disadvantage.

6.3.3.6 Vehicles

You can find teachers for any vehicle quite easily. As part of your education, you will work for your instructor and hence do not need to pay them additional gold.

6.3.3.7 Scroll Proficiency

You can attempt to cast spells from Spell Scrolls that are not normally available to you if you have **Scroll Proficiency**. To do so, you must succeed on a check using your **Spellcasting Ability modifier + your proficiency bonus**. The DC is 13 + the spell's level (Cantrips count as level 0). If you do not have a Spellcasting Ability, use a straight d20 + proficiency bonus for the check.

To master proficiency with Spell Scrolls, you must find an NPC teacher, who typically **charges at least 50 GP per week** for instruction (possibly more, at the DM's discretion).

All Learning Rolls to gain Scroll Proficiency are made using your **relevant Spellcasting Ability modifier**. If you do not have a Spellcasting Ability, you make a straight d20 check. Unless you have levels in Wizard, you make these Learning Rolls with disadvantage.

6.4 Searching for Moradinium

Moradinium is a magical resource that is required for crafting magic items. Every magic item requires a specific and fixed amount of Moradinium based on its rarity.

Moradinium can only be acquired by searching for it during downtime or as a mission reward.

To search for Moradinium, use 5 DT (= 1 week) and make one Mining roll in **#lifestyle-work-and.mining** using the chatbot command **/mine**

You receive **2 Moradinium**, plus **1 additional Moradinium** for every 4 full points by which the roll exceeds 1.

Result Table:

Roll	Total Moradinium
1-4	2

5-8	3
9-12	4
13-16	5
17-20*	6

*If the roll is a **natural 20**, the character gains plus **1 additional bonus Moradinium**, for a total of **7 Moradinium**.

6.5 Crafting

In general we follow the RAW in the DMG 2024 with the following exceptions and clarifications.

6.5.1 Arcana Proficiency

It's not necessary to have proficiency in the Arcana skill to craft an item.

6.5.2 Crafting Tools

The following table lists which tool is required to make a magic item of each category. However, as not all items or consumables can be categorised easily according to tool proficiency the table is NOT exhaustive AND there could always be made a case for how an item is crafted using specific tools. In doubt the guild council will decide.

You must use the required tool to make an item and have proficiency with that tool. Any **assistants** must also have the same or higher level of proficiency with it.

As a **journeyman** you can craft standard items and items of common rarity.

As an **expert** you can additionally craft uncommon items.

To also craft rare, very rare, and legendary items, you must first **master** the tools in question.

You can craft any item that would reasonably fall into your field of expertise. So for example to craft a cloak of protection you would need to be an expert weaver, to create a ring of protection, a master jeweller and so on.

It's not necessary to know or prepare the spells imbued into an item. This is part of the raw materials (crafting cost).

Tool Proficiency	Ability	Item Types
Alchemist's Supplies	INT	Antidotes, Candles, Drugs, Dusts, Explosives, Oils, Ointments, Paints, Perfumes, Philters, Potions
Brewer's Supplies	INT	Brews (see special rules)

Calligrapher's Supplies	DEX	Books, Scrolls (see special rules), Tomes
Carpenter's Tools	STR	Wooden Rods, Staffs, Poles, Wood Armor
Cartographer's Tools	WIS	Books, Shards, Tomes
Cobbler's Tools	DEX	Boots, Shoes
Cook's Utensils	WIS	Meals (see special rules)
Glassblower's Tools	INT	Bottles, Glass Beads, Lanterns, Orbs, Capsules, Bubbles, Vials, Goggles
Herbalism Kit	INT	Healing Potions (see special rules), Antidotes, Drugs, Ointments
Jeweler's Tools	INT	Rings, Gems, Beads, Amulets, Periapts, Medals, Necklaces, Earrings, Tokens, Charms
Leatherworker's Tools	DEX	Gloves, Leather Armor & Weapons, Pouches, Leather Bags, Cloaks, Headbands, Wristbands, Belts
Mason's Tools	STR	(Ioun) Stones, (Stone) Dice, Statuettes & Figurines, Stone and Crystal Weapons, Ammunition (Sling Bullets)
Painter's Supplies	WIS	Tattoos (including Spellwrought Tattoos), (Card)Decks, Paints
Poisoner's Kit	INT	Poisons (see special rules), Antidotes, Drugs
Potter's Tools	INT	Jars, Pots, Statuettes & Figurines, Tankards, Bowl
Smith's Tools	STR	Metal Armor, Metal Weapons, Ammunition (Arrows, Bolts, Needles, Sling Bullets), Metal Rods
Tinker's Tools	DEX	Locks, Keys, Artificial Body Parts, Tools, Pens, Machines, Metal Instruments, Explosives, Firearms, Ammunition (Firearm Bullets, Cannonballs, Flares, Shells, Shots)
Weaver's Tools	DEX	Cloaks, Clothes (Armor), Robes, Hats, (Head) Bands, Ropes, Dolls, Weaves, (Cloth) Bags

Woodcarver's Tools	DEX	Wood Instruments, Wands, Staffs, Wood Weapons, Ammunition (Arrows, Bolts, Needles), Pipes, Canes, Wood Bowls
--------------------	-----	--

6.5.2.1 Time & Cost

Crafting a magic item takes an amount of time and money based on the item's rarity as shown in the tables below.

For each day of crafting, you must work for a full day of downtime. If an item requires multiple days, those days needn't be consecutive.

6.5.2.2 Raw Materials

The table's cost is the required raw materials to make a magic item; availability is assumed unless the DM rules otherwise. If the item incorporates a purchasable base item, pay that full cost or craft it per the Player's Handbook. Example: +1 Plate costs 3,500 gp (Plate 1,500 gp + enchantment 2,000 gp) or 2,000 gp plus crafting the plate yourself (750 gp materials).

A Mechanical Benefit is any effect usable under the rules to change outcomes beyond narration, including modifiers, advantage/disadvantage, AC, damage, DCs, movement or senses, conditions or resistances, resource charges or spell use, proficiency or feature access, or procedure/timing changes (such as don/doff, draw/stow, reload). A Cosmetic Feature changes description only—appearance, material, motif, finish, form factor, or a command-word look—with no rules impact.

Using a Cosmetic Donor Item. You may use another item—including a magic item—purely as raw material for its Cosmetic Features. The finished item gains only the Mechanical Benefits of the thing you are crafting; the donor contributes appearance only.

Adding Cosmetics to an Existing Mechanical Item. You may add Cosmetic Features to an item that already has Mechanical Benefits. These additions cannot create, modify, stack, or preserve any Mechanical Benefit. Rarity, attunement, weight, action timing, and printed features remain unchanged.

For clarity: properties like Cast-Off change don/doff timing and are Mechanical Benefits; they cannot be added or carried over. A Bag of Holding made with shiftweave may change its look, but it remains a normal Bag of Holding in all mechanical respects.

Examples: Seiri crafts a bag of Holding for Calliope. As she knows that Calliope needs some extra attention to fashion as she is an Eladrin who changes her colours (and moods) quickly, she uses shiftweave material for the bag. The resulting Shiftweave Bag of Holding now can be changed with a command word to the fashion needs at hand.

Uppo crafts a vicious spear for Seiri but as spears are long and ugly he uses a Fey Blade Spear as raw material for the Spear, making a Fey Blade Vicious Spear. However, he couldn't have used a +1 Spear as raw material for a +1 Vicious Spear, as +1 to Attack is a game mechanical benefit that can't be granted by raw materials.

6.5.2.3 Crafting Non-Consumables

To craft an item you have to spend the number of days and the amount of gold as well as the number of moradinium units given in the table below. These numbers depend on your mastery of the tools used.

Rarity	DT in Days			GP	Moradinium
	Journeyman	Expert	Master		
Standard	GP ¹ / 10	GP ¹ / 25	GP ¹ / 75	5e.tools ²	-
Common	5	3	1	50	1
Uncommon	-	5	3	200	4
Rare	-	-	5	2.000	16
Very Rare	-	-	20	20.000	64
Legendary	-	-	Spezialregel	100.000	256

¹ Selling price [5e.tools](#) (RAW) or homebrew (**#general-store** channel on Discord)

² Half price for crafting cost

³ For legendary items you roll 1d20 per 5 days of downtime. As you accumulate 100% progress the item is finished.

Examples:

Uppo, an expert smith, wants to craft a longsword +1. He decides to buy a standard sword from a local smith for 15 GP and adds his magic to it, spending five days as an expert smith, 200 GP for materials, and four moradinium to bind the magic into the weapon.

Lucy, also an expert smith, wants to craft an Adamantine Full Plate Armour. She decides to craft the Full Plate Armour herself. So, she first needs to spend $1500/25 = 60$ days and 750 GP of raw materials to craft the armour that is then used to imbue it with the special material adamantine. Now she spends five more days, 200 GP for raw materials, and four moradinium to bind the adamantine unto the armour. So, all together she has to spend 65 days, 950 GP, and four moradinium to craft the Adamantine Full Plate Armor.

6.5.2.4 Crafting Consumables

To craft a consumable you have to spend the number of days and the amount of gold given in the table below. These numbers depend on your mastery of the tools used.

Consumables in this context are: **Antidotes**, **Beads**, **Candles**, **Drugs**, **Dusts**, **Explosives**, **Oils**, **Paints**, **Perfumes**, **Philters**, and **Potions**.

Also, [Poisons](#), [Spell Scrolls](#), [Spell Wrought Tattoos](#), and [Brews](#) are consumables but they have their own tables.

Rarity	DT in Days			GP ³
	Journeyman	Expert	Master	
Standard	GP ¹ / 25	GP ¹ / 50	GP ¹ / 100	5e.tools ²
Common	1	½	¼	25
Uncommon	-	1	½	50
Rare	-	-	1	200
Very Rare	-	-	5	400
Legendary	-	-	20	1000

¹ Selling price [5e.tools](#) (RAW) or homebrew ([#general-store](#) channel on Discord)

² Half price for crafting cost

³ If a consumable emulates a spell effect that originally consumes materials with a money value, this material costs have to be paid additionally

Example: Seiri wants to craft potions as a master of her art. As there is no standard item base for potions she has to craft all from scratch. She crafts two potions of maximum power (1 day and 200 GP each) and four potions of greater healing (half a day and 50 GP each), spending four days of downtime (DT) and 600 GP.

6.5.2.5 Spell Scroll & Spellwrought Tattoo crafting costs by level

To create a **Spell Scroll** or a **Spellwrought Tattoo**, you must spend the number of DT and the amount of gold shown in the table below. These numbers depend on your skill with the tools (Journeyman, Expert or Master).

You can only create scrolls or tattoos from spells that **you can cast yourself** and for which you have the components (if required).

Spell Level	Rarity	DT in Days			Spell Wrought Tattoo (in GP ¹)	Scroll (in GP ¹)
		Journeyman	Expert	Master		
0 (Cantrip)	Common	1	½	¼	40	25
1	Common	2	1	½	60	40
2	Uncommon	-	1 ½	1	80	50
3	Uncommon	-	2	1 ½	150	100
4	Rare	-	-	2	300	200

5	Rare	-	-	3	450	300
6	Very Rare	-	-	5	-	400
7	Very Rare	-	-	10	-	600
8	Legendary	-	-	15	-	1000
9	Legendary	-	-	20	-	2000

* If the spell imbued into a scroll, brew, or spell wrought tattoo consumes materials with a money value, this material costs have to be paid additionally.

6.5.2.6 Poison Crafting Cost

To craft a **poison** you have to spend the number of days and the amount of gold given in the table below. These numbers depend on your mastery of the tools used.

Poison	Type	DT in Days			GP per Dose
		Journeyman	Expert	Master	
Assassin's Blood	Ingested	1	½	¼	75
Truth Serum	Ingested	1	½	¼	75
Carrion Crawler Mucus	Contact	1	½	¼	100
Lolth's Sting	Injury	1	½	¼	100
Serpent Venom	Injury	2	1	½	100
Malice	Inhaled	2	1	½	125
Pale Tincture	Ingested	2	1	½	125
Essence of Ether	Inhaled	2	1	½	150
Biza's Breath	Inhaled	-	2	1	200
Oil of Taggit	Contact	-	2	1	200
Burnt Othur Fumes	Inhaled	-	2	1	250
Torpor	Ingested	-	2	1	300
Wyvern Poison	Injury	-	-	2	600

Midnight Tears	Ingested	-	-	2½	750
Yserthrax's Corruption Poison	Injury	-	-	2½	750
Purple Worm Poison	Injury	-	-	3	1.500

6.5.3 Assistants

The rules of the DMG 2024 apply. However, as we have three levels of expertise in tools (journeyman, expert, and master) we have to account for the differences in time offered to assist others.

The following table lists the days a Journeyman, an Expert, and a Master would need to help an artisan of another level of expertise that counts as one day of downtime for this artisan.

Artisans have to **spend at least 20% of the time themselves** to craft an item. An assistant needs at least the same amount of time to assist then the artisan needs to craft an item (the assistant can't be quicker than the artisan).

Furthermore, an assistant **can't assist with more than 50% of the time needed** to craft an item that they wouldn't normally be able to craft themselves. A journeyman can't assist with items beyond uncommon rarity and an expert can't assist with items beyond rare rarity.

Rarity	Work in Days		
	Journeyman helps (per work day from)		Expert helps (per work day from)
	Expert	Master	Master
Standard	2,5	7,5	3
Common	2	4	2
Uncommon	4 ¹	8 ¹	2
Rare	-	-	4 ¹

¹ If your level of expertise with a set of tools doesn't let you craft an item yourself, you can only assist for 50% of downtime the artisan needs to craft the item.

Examples:

Uppo wants to craft a half plate armour. He is an expert smith and would need 30 days of downtime for this. However, he asks Naddin, a journeyman smith, to assist him. Naddin would be able to assist for 20 days. This would reduce Uppos' time to craft the armour by 8 days (20/2.5), so he can finish it in 22 days.

Luminara wants to brew a Potion of Climbing. The base time for this is 1 day of downtime. She asks Seiri, who is a master alchemist, to help her. As they want to be done as quickly as possible they decide to both work on the potion half a day (4

hours) to brew it. Seiri doesn't get any advantage here because she can't work quicker on a potion she helps another artisan brewing.

If they were doing it the other way around (Luminara helping Seiri), they would need only two hours, as Seiri alone needs two hours (0.25 days) and Luminara needs four times as long as Seiri. If Seiri would let Luminara assist for 0.05 days (24 minutes!) of her own work that would mean $4 * 0.05 = 0.20$ days (1 hour and 36 minutes) for Luminara. Seiri would then only need to work the other 0.2 days (1 hour and 36 minutes) on the potion ending her work 24 minutes earlier than without Luminara's help.

6.5.4 Specific Crafting Tools

Sometimes the general crafting rules have to be adjusted or it has to be clarified, what can be done with a specific set of crafting tools. This chapter will be amended as needed if rules for crafting with specific tools are not clear enough and might lead to different interpretations.

6.5.4.1 Cook's Utensils

You can use your DT to craft **fancy meals** using the cook's utensils. **Fancy meals** are consumables but cost just **5%** of a regular consumable to craft.

The meals you create will give any character who eats it the **sated** bonus for 8 hours. While this bonus is active they get a **+1 modifier to any skill check** they make with a certain ability (but not attack rolls or saves), for example, one meal might modify all STR based skill checks, while another affects all CHA based skill checks. Which skill is affected is determined by the cook when the meal is created.

For using the crafting rules in this document, a **fancy meal** that provides a sated bonus with one effect counts as **common** consumable, one that provides a sated bonus with two effects counts as **uncommon**, and one that provides a sated bonus with three effects counts as **rare**. You can only have one sated bonus with up to three **different** effects active. You **can't** choose the same ability twice or thrice.

If you have the **Chef feat**, you can replace one of the effects on your fancy meals with gaining **1d8 temporary hit points**.

In addition, if you use the **Chef feat** to cook a meal or treats during a short or long rest respectively, you can replace the temporary hit points gained by eating the food with one of the skill check bonuses described above.

6.5.4.2 Brewer's Supplies

Brewing is a long standing monastic tradition with more nuance than perhaps first assumed. (Recommended for experienced adventurers, as the mechanics are somewhat complex). You can brew consumables with the brewer's supplies.

To create a brew (consumable), you choose a cleric spell of level 0-3. **You can only select spells that meet all of the following criteria, regardless of your skill level:**

- The spell has only **beneficial effects**.
- The duration is **1 minute to 1 hour**.

- It does **not require any costly components** (except for holy symbols) or consume any components (components with no gold value which are not consumed are fine).
- It targets **1 or multiple creatures**, not an object or location (Note: Corpses are not creatures). The creature can be yourself.
- It does **not have a radius**.

A creature that consumes the brew will be affected by the chosen spell for one minute. You can consume a brew in a bonus action. You can only have one brew effective at a time.

- The effect will always be at its base level (a brew cannot be upcast).
- If multiple creatures could normally be targeted, the brew will instead only target the creature that drank it.
- If the spell normally requires concentration, this is not required if the effect is gained from a brew. However, such brews require more skill to create.

Same as with potions, the effect is magical and can be dispelled, though dispel magic will not render an unconsumed brew or potion non-magical.

If a creature drinks more than one brew before taking a long rest, after the brew takes effect it must make a **constitution save** with a **DC equal to 10 + two times the number of brews it has already consumed**. On a failed save, the creature is poisoned for one hour.

What kind of brews you can create depends on your level of skill:

Spell Level	Spell has concentration	Rarity	DT in Days			Brew (in GP ¹)
			Journeyman	Expert	Master	
0 (Cantrip)	No	Common	½	¼	⅛	25
0 (Cantrip)	Yes	Common	1	½	¼	30
1	No	Common	2	1	½	40
1	Yes	Uncommon	-	1½	1	50
2	No	Uncommon	-	2	1½	100
2	Yes	Rare	-	-	2	200
3	No	Rare	-	-	3	300

¹ If the spell imbued into a scroll, brew, or spell wrought tattoo consumes materials with a money value, this material costs have to be paid additionally.

6.5.4.3 Herbalism Kit

You can brew **healing potions**, **antidotes**, **drugs**, and **ointments** using a herbalism kit. You can gather the needed ingredients yourself instead of having to buy them, saving on some or all of the cost involved.

If you wish to **gather your own ingredients** for a potion, antidote, or drug you **double the DT** for crafting it. You **don't** have to **pay** the crafting cost in **GP** for this consumable.

6.6 Earning Money with Tool Proficiencies

During Downtime (DT), a character may attempt to earn gold by using **one** of their tool proficiencies. This action represents **5 DT** of work.

The earning roll must be calculated as follows:
d20 + relevant ability modifier + proficiency bonus

If the roll is a **natural 20**, the final gold earned from the table below is increased by **20%**.

Earning Roll	Earnings (GP)
0-10	7 GP
11-15	14 GP
16-20	28 GP
21-25	56 GP
26 or higher	112 GP

If a character has **both** the required tool proficiency **and** the relevant skill, the roll is made **with advantage**.

If a character has **expertise** in the applicable tool or skill, expertise bonuses **must be applied**.

The Guild Council currently recognizes the following tool and skill combinations. If a **natural 1** is rolled, the listed consequence **automatically occurs**:

Tool Proficiency	Relevant Skill	Natural 1 Consequence
Musical Instrument, Painter's Supplies	Performance	Booed from stage (no other earnings this DT)

Gaming Sets	Insight	Thrown out (no other earnings this DT)
Vehicles	Animal Handling	Broken vehicle (–30 GP in reparations)
Navigator's Tools	Survival	Sinking ship (–30 GP in reparations)
Thieves' Tools	Sleight of Hand	Caught and imprisoned (–20 DT)
Disguise Kit	Deception	Caught and imprisoned (–20 DT)

DMs or the Guild Council **may require explicit justification** for the use of a tool based on the character's background or roleplay.

Example:

Silverbell is proficient with the lute and has the Performance skill. She rolls with advantage using **d20 + CHA modifier + proficiency bonus**. With a Charisma modifier of +5 and a proficiency bonus of +2, she rolls an 8 and a 13 and keeps the higher result.

Calculation:

$13 + 5 + 2 = 20$, resulting in **28 GP** earned for **5 DT** of performances.

7. Bastions

In general we follow the [RAW in the DMG 2024](#) with the following exceptions and clarifications.

7.1 Gaining a Bastion

Additionally to RAW, Characters need a certain lifestyle to be able to gain and maintain a Bastion according to the following table. Characters with a wretched or modest lifestyle cannot afford a Bastion. Should a character that owns a Bastion slip to a lifestyle too low to maintain it, the Bastion is gone immediately.

Character Level	Max. Number of Basic Facilities			Max. Number of Special Facilities		
	Comfortable	Wealthy	Artistocratic	Comfortable	Wealthy	Aristocratic
1-4	-	-	-	-	-	-
5-8	3	6	12	1	2	3
9-12	4	8	16	2	4	5
13-16	5	10	20	3	5	6

17+	6	12	unlimited	4	6	7
-----	---	----	-----------	---	---	---

7.2 Bastion Turns

Bastion turns follow RAW. The frequency is one week, so every LC spent is one Bastion turn. If you miss out twelve LC the Bastion is lost due to neglect. If you pay for LC but don't give any Bastion orders it will be maintained. However, you can only give bastion orders or roll for Bastion events when you set your LC to 0. You roll for Bastion events in the **#keep-it-rolling** channel and the results are resolved according to the tables in the RAW.

In the **#bastion-turns** channel, you give instructions to the employees of your bastion.

A character can only benefit from a Bastion directly when their downtime is spent consecutively in the Bastion facilities. However, **5 days of DT** count as one week for this purpose.

7.3 Bastion Maps & Facilities

For your **Bastion facilities** to grant any advantage, both the Bastion and its hirelings must be detailed in the **#characters-and-bastions** channel and mapped within **The Guild** in Foundry. Generally, these descriptions should be placed in the relevant journal within **The Guild**. All other aspects remain as per RAW.

7.3.1 Basic Facilities

The money needed to add or expand a basic facility is halved. There is no time requirement for adding or expanding a basic facility. No further changes to RAW.

7.3.2 Special Facilities

Hirelings are always the minimum level of expertise necessary to fulfil the described tasks.

- To craft standard or common items they would only need to be **Journeyman**.
- To craft uncommon items, they would need to be **Experts**.
- To craft rare, very rare, or legendary items they would need to be **Masters**.

One Bastion turn counts as **5 days for use of downtime** for crafting.

7.3.3 Specific Special Facilities

Some Special Facilities need to be adjusted to the rules in this document. Here only the adjustments are mentioned, else RAW applies.

7.3.3.1 Arcane Study

To craft an item that grants spells (e.g., a scroll or wand), you must be present for the entire crafting duration, not on a campaign or multi-shot mission, and keep all associated spells prepared. You must also supply any spell materials. **You are not, however, required to spend any Downtime (DT) during the item's creation.**

7.3.3.2 Laboratory

The facility's hireling crafts any consumable that can be made with Alchemist's Supplies **using the rules in this document.** They are experts at their trade. The facility's hireling can use half the week in DT to craft common or uncommon consumables.

7.3.3.3 Scriptorium

The facility's hireling can use half a week's DT to craft spell scrolls from the Wizard and Cleric spell list **using the rules in this document.** They are experts at their trade.

7.3.3.4 Training Area

When you issue the **Empower order** to this facility, the facility's hirelings conduct training exercises for the next 5 days. Any character who trains here for at least **1 full day of downtime** gains a benefit at the end of the training period. The benefit depends on which trainer is present in the facility, as noted in the Expert Trainers table. The benefit lasts for the next mission or 5 days of downtime.

Tools Expert: You gain the journeyman level with one tool of your choice. If you already are a journeyman you gain expert level in that tool.

8. Homebrew Additions

8.1 Homebrew Classes

8.1.1 Gunbreaker

PDF to original version is found [HERE](#)

However, we made some homebrew adjustments to it:

- Proficiencies: firearms (pistols, muskets) has been removed
- Equipment: instead of having the choice to get a pistol, a light crossbow can be chosen
- Gun Weapons: We allow all weapons to be your gun weapon, which has not the properties "Light" or "Finesse"
- Burst Strike: Damage is reduced to 1d8 (2d8 from lvl9, 3d8 from lvl17)

- Draw and Junction:
 - Gnashing Fang: Stun-duration is defined to be until the start of your next turn
 - Heart of Stone: This option is removed, because we consider it unbalanced
- Guardian subclass:
 - Merciless Defender: we remove the possibility to make opportunity attacks without using your reaction. Consuming your reaction is necessary to keep the class balanced
- Lionheart subclass:
 - Relentless Rush: we remove the possibility to reuse this feat every time you land a hit with the attack. So you may use this only once per turn

8.2 Homebrew Subclasses

8.2.1 Sorcerer: Pyromancer (PSK) – Fire God Version

Your innate magic manifests in fire. You are your fire, and your fire is you. You gain your *Heart of Fire* feature at third level (like all other subclasses). Your features and feats always work with all spells that (can) deal fire damage, directly or indirectly. These are called “Pyromancy Spells”.

Furthermore, you gain additional pyromancy spells on levels three, five, seven, and nine. These spells are always prepared and don’t count against the number of prepared spells from your class.

Level	Pyromancy Spells
3	Arms of Alkwar (Arms of Hadar with Fire), Burnings Hands, Fire of Healing (Prayer of Healing), Heat Metal
5	Absorb inner Fire (Vampiric Touch with Fire), Alkwars Mantle (Crusader's Mantle with Fire)
7	Summon Elemental, Wall of Fire
9	Conjure Elemental, Alkwar’s Bond (Rary’s Telepathic Bond)

8.2.2 Bard: College of Colour

The college of colour focuses on using the magic of paint to empower themselves and their allies on the battlefield. Creating enchanted pain, and splattering their foes with its majesty. Transforming attacks into the right damage type to fit the situation. Exploiting vulnerabilities and maximising damage. Think twice the next time you encounter an unassuming painter. There may be more to them than meets the eye.

8.2.2.1 Magic Colour Table

Colour	Black	White	Red	Blue	Yellow	Green	Orange	Purple	Violet
Damage Type	Necrotic	Radiant	Fire	Cold	Lightning	Poison	Acid	Psychic	Thunder

8.2.2.2 The Brush is mightier than the Sword

Starting at the 3rd level when you take this class, you gain proficiency with painter's supplies. If you already have proficiency with this tool, you gain expertise with it. A paintbrush can be used as your arcane focus. You also learn to create magical paint with the painter's supplies.

Please view the magic colour table to see what colour paint does what type of damage, At the 3rd level you learn to use two of the following colours: red, blue, yellow and green.

Any sound component CAN be replaced with a drawing or symbol by using your paintbrush. Bardic songs for you are now bardic paintings. This only replaces the requirements of an instrument. Other components are still needed.

Also, your brush can be used as a weapon. You're proficient with it, and it counts as a finesse weapon. The brush deals 1D8 of damage from the colour you last dipped in, from the colours you know how to make from the colour magic table. You add your charisma modifier to attack roll and damage dealt when using your bush as a weapon. You can use an action to dip the brush in another colour you learned.

8.2.2.3 Colour Theory

As a bonus action, you can expend a use of your bardic inspiration to empower one of your ally's attacks or defence. Choose a creature you can see within 20ft. You coat them in the paint colour of your choice, For the next minute, the creature is empowered with your paint.

When they hit on a single target attack, they can choose to roll a bardic inspiration dice. Once the bardic inspiration dice are rolled, they are lost. Add the number rolled to their attack damage. The type of damage is determined by the colour of paint you used.

They can also expend the bardic inspiration die as a reaction to gain resistance to the damage type associated with the colour of paint you used. This lasts until the end of the turn.

8.2.2.4 Colour Transmutation

At the 6th level you learn to transform your magic with the power of your paint. Whenever you cast a spell that deals damage you can decide to change the damage type to the colour your brush is currently dipped in.

You can do this several times, equal to your charisma modifier. You regain all expended uses when you finish a long rest.

In addition you can now learn to create two more colours between: red, blue, yellow, green, orange, purple, violet and black. You learn two more colours each on 8th and 11th level

8.2.2.5 Master of Colour

By the 14th level you have become a master of colour. You can now use any colour on the magic colour table. Additionally, using the colour transmutation ability to change the damage type of your cantrips, does not expend a use of colour transmutation.

You also learn to empower your abilities. Whenever you cast a damage dealing spell add your charisma modifier to the damage dealt. Whenever a creature benefits from your Colour Theory ability to deal damage, you may add your charisma modifier to the damage dealt.

8.3 Homebrew Weapons

8.3.1 Weapon of Lightning

Generic variant for martial melee weapon (any), uncommon

Modifiers: You have a +1 bonus to attack rolls made with this magic weapon.

When you wield this magic weapon and hit a creature with a melee attack you can speak its command word and strike the creature and every creature behind it in a straight line (60 feet long and 5 feet wide, starting from you) with lightning.

The target then takes normal damage from the attack and additional **2d6 Lightning damage**.

Every other creature that stands in the lightning's path must make a **Dexterity saving throw** (DC 13), taking **4d6 Lightning damage** on a failed save, and half as much damage on a successful one. Once you use the weapon in this way, you can't do so again until the next dawn.

8.3.2 Lighting Tongue Weapon

Generic variant for melee weapon (any), rare (requires attunement)

While holding this magic weapon, you can take a Bonus Action and use a command word to cause lightning to engulf the damage-dealing part of the weapon. While the weapon is static, it deals an extra **2d6 Lightning damage** on a hit.

When you hit a target with this weapon, the target has to make a **Constitution saving throw** (DC 14), on a failed save the target loses its reaction until his next turn. This effect does not apply to targets who have lightning immunity.

The lightning infusion lasts until you take a bonus action to issue the command again or until you drop, stow, or sheathe the weapon.

8.3.3 Shocking Weapon

Generic variant for melee weapon (any), rare (requires attunement)

Modifiers: You have a +1 bonus to attack rolls (not damage) made with this magic weapon.

On a successful hit this weapon causes additional 1d8 lightning damage.

Shocking hit: 3 charges, regains 1 charge per day until it's maximum of 3 charges.

Once per turn, on a successful hit, the user can activate this effect: The target of the attack must succeed a DC13 Dexterity saving throw or take an additional 1d8 lightning damage and lose his reaction until his next turn. This effect does not apply to targets who have lightning immunity.

8.3.4 Corrupted Flametongue

Generic variant for melee weapons (any sword), rare (requires attunement)

This magic weapon radiates an ominous, smoldering energy. The eerie, flickering glow of the weapon casts long shadows and exudes an unsettling aura, hinting at its corrupted and unnatural origin.

You can use a bonus action to speak the weapon's command word, causing dark flames to erupt from its blade. While the weapon is ablaze, it deals an extra 2d6 fire damage to any target it hits. The flames last until you use a bonus action to speak the command word again or until you drop, stow or sheathe the weapon.

When the weapon is activated, it sheds dim light in a 40-foot radius, regardless of the ambient lighting. This effect diminishes bright light to dim light and turns areas of darkness (non-magical) into dim light within the radius. However, this dim light does not negate the Sunlight Sensitivity trait of creatures such as drow or kobolds.

8.3.5 Countering Dagger

Simple Melee Weapon, rare (requires attunement)

- Weight: 1 lb
- Damage: 1d4
- Properties: Finesse, Light, Thrown (range 20/60), Nick
- Modifiers: +Proficiency AC and counter attack/reaction

When attuned to this magical dagger, holding it in your hand and not holding a shield you can use your reaction to parry with it one attack that hits you, potentially turning it into a miss. Parrying in this way gives you a bonus to your AC against the triggering attack equal to your proficiency bonus.

If the triggering attack was turned into a miss, you can use the same reaction to make an opportunity attack with the dagger (counter attack) against the creature who's attack was turned into a miss before.

Mastery: Nick. When you make the extra attack of the Light property, you can make it as part of the Attack action instead of as a Bonus Action. You can make this extra attack only once per turn.

8.3.6 Poison Blade

Simple Melee Weapon, uncommon

- Weight: 1 lb
- Damage: 1d4
- Properties: Magical, Finesse, Light, Thrown (range 20/60), Nick

Whenever you use this weapon to attack, it deals an extra 1d6 Poison damage on a hit.

Mastery: Nick. When you make the extra attack of the Light property, you can make it as part of the Attack action instead of as a Bonus Action. You can make this extra attack only once per turn.

8.3.7 Fey Blade

Generic variant for melee weapon (**any**), uncommon

All else is RAW: [Fey Blade in 5e.Tools](#)

8.4 Homebrew Standard Items

8.4.1 Bicycle

Small or Medium Land Vehicle

Cost: 75 gp

Weight: 12 lbs.

Capacity: 1 Small or Medium creature (max. 400 lbs.)

Travel Speed: 50 ft. (paved or stable surfaces only)

Terrain Adaptation

- **Unpaved Terrain:** Speed reduced to 20 ft. (must be pushed)
- **Difficult Terrain:** Speed reduced to 5 ft. (must be carried)
- **Terrain Transition:**
When moving from paved to unpaved or difficult terrain, the rider must succeed on a **DC 10 or DC 20 Dexterity (Acrobatics) check**, respectively.
On a failed check:
 - The rider falls **prone**
 - The **remaining movement is lost**

Operation

- Requires **both hands** to operate
- Rider cannot perform actions that require **free hands** while using the bicycle

Structure

- **Armor Class:** 15 (steel frame)
- **Hit Points:** 25

- **Fragile:** Suffers **critical damage** if dropped from 10 ft. or higher (DM's discretion)
- **Damage Immunities:** Poison, Psychic, Thunder

8.5 Homebrew Wondrous Items

8.5.1 Stone of Maleshai's Blessing

Item (wondrous item), common

Modifiers: Saving Throw or Attack Roll +1d4/day

While you carry the Stone of Maleshai's Blessing you are blessed with the power of Maleshai. Once a day you can add 1d4 to any saving throw or attack roll. You can decide to use the blessing after you know the initial result of the roll.

8.5.2 Norn Metal Bracers

Item (wondrous item), rare (requires attunement)

Modifiers: +2 AC

While you wear the bracers and no medium or heavy armour you gain +2 AC.

8.5.3 Cantrip Tattoo (can only be crafted by a person that knows the cantrip)

Item (wondrous item), common (requires attunement)

Modifiers: Spell ability modifier +3, attack bonus +5, spell DC 13

Using an action you can cast the tattooed cantrip.

8.5.4 Flour of Awakening

Wondrous Item, uncommon (consumable)

A fragrant pouch of sparkling magical flour—sweet as vanilla and mysterious like a family recipe. When used this flour can bring life into a gingerbread figure.

Usage

Ingredients: 1 pouch of Flour of Awakening, honey, spices, dough, and decorations worth 2GP

Time Required: 8 hours of baking and decorating

Check: DC 7 Wisdom (Cook's Utensils)

Crafting Restrictions

At least Expert skills in Cook's Utensils are required to use this flour and animate one Servant.

Master skills allows baking up to three Gingerbread Servants in one session (roll separately for each).

On a success, the baker creates one Gingerbread Servant (see stat-block), which will come to life after you use a Bonus Action to speak a command word of your choice, and than stays alive for up to 24h.

On a failure, the creation remains delicious—but will not come to life.

A maximum of three Gingerbread Servants may be active at any given time. If a fourth Gingerbread Servants is activated, the first summoned is destroyed immediately.

8.5.4.1 *Gingerbread Servant*

Tiny Construct, Neutral

Armor Class: 13

Hit Points: 5 + (2 × your level)

Speed: 20 ft.,

climb 20 ft.

STR 2 (−4) DEX 14 (+2) CON 10 (+0) INT 8 (−1) WIS 10 (+0) CHA 12 (+1)

Damage Immunities: Poison

Condition Immunities: Poisoned

Vulnerability: Hot or warm water, and milk (will dissolve the Servant immediately)

Senses: Darkvision 30 ft., Passive Perception 10

Languages: Understands the languages of its creator; can speak in short, broken phrases

Actions & Traits Little Helper (1/turn, Bonus Action) – Choose one of the following:

Clumsy Comfort: The servant touches a creature, granting it advantage on its next death saving throw or concentration check. (Usable once per short rest per Servant.)

Crumb Trail: Leaves behind a 10-foot trail of frosting or crumbs, usable to leave signals, draw simple shapes, or write messages. *Helpful Hands:* Uses the Help action on an adjacent creature, but only for Dexterity or Intelligence ability checks.

Snack Yourself: The servant can destroy itself to heal a creature within 5 feet for 1d4 hit points.

Quirks Cannot make attacks or deal damage. Lives in pockets, teacups, and kettles. Sweet, sarcastic, and sassy. Loved by animals. Goblins are particularly tempted to eat it.

8.5.5 Mirror of the Doppelganger

Wondrous Item, uncommon (requires attunement)

While holding and attuned to this hand mirror, you can use an action to cast mirror image from it, without expending a spell slot or material components. Once used, the mirror can't be used again until the next dawn.

Shattering Risk. If the mirror was used since the last dawn, roll a d20 at the next dawn. On a 1, the mirror shatters and is destroyed. Otherwise, it regains its use.

8.6 Homebrew Consumables

8.6.1 Potions

8.6.1.1 Brine Jelly Ale (Brew)

Potion (uncommon)

Brine Jelly Ale is made from Demon Apples that only grow in the darkest planes of chaos and destruction. It's the only beverage that can make even demons drunk. Its recipe was invented by Alfred Moonwalker III, who was one of the most promising Demonologists...until he invented it. However, whoever drinks at least one small cup (4+ oz.) of Brine Jelly Ale is utterly pissed (poisoned)...absolutely and totally, until the next morning. There is absolutely no way of avoiding this, not even immunity to poison, besides one: Don't drink Brine Jelly Ale!

8.7 Homebrew Spells

8.7.1 Speak with Images

Level 3 Transmutation

Casting time: **1 Action** or **Ritual**

Range: 10 feet

Components: V,S,M (a paint brush bristle)

Duration: 10 minutes

You cause a character in an image or art piece (such as a painting, sculpture, ect.) to come to life and begin speaking. For the duration, the target can speak and understand a language you know, see and hear, and recall events that occurred in the past 24 hours as if the target could see and hear during that time. The target cannot remember events that occurred before or during its creation. The target takes on a personality and alignment befitting of the type of creature it represents.

At Higher Levels. When you cast this spell using a spell slot of 4th level or higher the target will be able to remember events that occurred further into the past. 3 days if cast at 4th level, 1 week if cast at 5th level, 1 month if cast at 6th level, 3 months if cast at 7th level, 1 year if cast at 8th level, or since the target was first created if cast at 9th level.

Classes: Bard, Sorcerer, Wizard

8.7.2 Flame Wave

(Source: Deep Magic, Page 71)

Level 4 Evocation

Casting time: **1 Action**

Range: Self (40-foot Cone)

Components: V,S,M (a drop of tar, pitch, or oil)

Duration: Instantaneous

A rushing burst of fire rips out from you in a rolling wave, filling a 40-foot cone. Each creature in the area must make a Dexterity saving throw. A creature takes 6d8 fire damage and is pushed 20 feet away from you on a failed save; on a successful save, the creature takes half as much damage and isn't pushed.

At Higher Levels. When you cast this spell using a spell slot of 5th level or higher, the damage increases by 1d8 for each slot level above 4th.

Classes: Sorcerer, Warlock, Wizard

8.8 Homebrew Features

8.8.1 Spell Prowess

Source: The Elements and Beyond, Page 227

Spell Prowess is a new feature for spellcasters. If you have spell prowess with a spell, you gain a bonus to the damage rolls of that spell equal to half your proficiency bonus.

In addition, when you attempt to cast a spell at a spell level equal to or less than two-thirds of your proficiency bonus and you have spell prowess with that spell, you can choose one component (somatic, verbal, or material) to ignore for that casting of the spell.

You can't use this rule to ignore components that are consumed or are worth more than 10GP, and you can't use this rule to make a spell require no components.

8.9 Homebrew Feats

8.9.1 Pyromancer

Source: The Elements and Beyond, Page 64

Prerequisite: Spellcasting or Pact Magic Feature

You specialize in the magic of flame, commanding the largest, brightest, and most explosive of fires to reduce nearly anything to ash, smoke, and cinders. You gain the following benefits:

You have [spell prowess](#) with [pyromancy spells](#).

The spells control flames, fire storm, heat metal, and immolation are added to the spell list of your spellcasting class.

When you cast a pyromancy spell you can choose to shed bright light in a 20-foot radius and dim light for an additional 20 feet until the end of your next turn.

When you cast a pyromancy spell of 1st level or higher, you can choose to explode the spell or ignite the spell.

Pyromancy: Exploding and Igniting

Whenever you cast a pyromancy spell that is **exploded**, you may choose the spell's range or one length, range, or radius within the spell's description. You treat that range, length, or radius as if it were 5 feet longer for this casting of the spell. This bonus cannot increase the range of any Self or Touch effects or spell ranges.

Right after you cast a pyromancy spell that is **ignited**, you can choose to ignite flammable objects that are not being worn or carried in a particular area. That area is your choice of the spell's area, the area within 10 feet of you, or the area within 10 feet of one creature or object that was dealt fire damage by the spell (you choose each time you cast). Each affected object that is already on fire takes fire damage equal to your proficiency bonus+ twice the spell's level that ignores resistance instead.

8.10 Transformations

8.10.1

In the Grim Hollow Player's Guide (2024), transformations are described in Chapter 6. Progression through the individual stages is normally handled via milestones or specific triggers.

Due to the nature of our play environment (rotating DMs, no continuous campaign structure, etc.), consistently tracking these milestones and triggers is not practical. Therefore, we instead use the Transformation Progression Table from the [Transformations Stage section](#).

As a result, progression through transformation stages occurs automatically based on character level.

Stages by Level Range

Charakterlevel	Transformations-Stage
1–4	Stage 1
5–10	Stage 2
11–16	Stage 3

17–20	Stage 4
-------	---------

Rule Effect: Whenever a character enters a new level range, they automatically advance to the next stage of their active transformation.

General Note on Transformations

Transformations represent a significant alteration to a character, both positively and negatively, affecting them mechanically, narratively, and in terms of roleplay. At higher levels, this may, under certain circumstances, also impact the group as a whole.

For this reason, the use of transformations should be carefully considered.
